Interfaces are the key to quickly increasing staff productivity. SMS is constantly monitoring our customers, new technology, standards committees. At the present time, SMS is an active member of NACS and participates on the POS/Back Office Subcommittee.

If your firm has plants, terminals, convenience stores, cardlocks, consignment accounts, and trucks...then they are all potential inventory locations. The EnergyElite Fuel Inventory Management system translates into tracking, from an accounting and physical perspective, all liquid products, at each of these discrete locations on daily, weekly, or monthly basis. Facilitating all aspects of inventory management that include the integration of meter readings, stick readings, inter-company transfers, as well as inventory adjustments, our system gives the user innovative tools for explicit reconciliation and management of inventory as it moves from the point-of-pickup to the customer.

With electronic interfaces to such products as Vertrax and Liquid Controls, EnergyElite allows the user to integrate other industry technology to tap into real-time inventory information without data entry or duplicate manual input. Giving the user the tools to spend more time analyzing and less time with manual data entry means providing solutions not just features. A complete component of the core General Ledger, the accounting of inventory variances, cost, and valuation are seamless and effortless.
